WORKING PAPERS

The Effects of E-commerce on Local Labor Markets Job Market Paper

In the last two decades, the retail sector has experienced several changes: a sharp decline in the number of brick-and-mortar establishments, the entrance of online retailers, and the expansion of e-commerce. In this paper, I use data from County Business Patterns and the Current Population Survey to study the effects of e-commerce as the digital disruption in the retail sector. I exploit the variation in the enactment of state legislation, known as Amazon Tax, to measure the effect of reducing the price advantage of out-of-state online retail on local labor markets. Through an event study difference-in-difference approach, I find robust evidence that the enactment of Amazon tax increases both the ratio of employment to the working-age population as well as establishments to the population at the county level.
